## EDUCATION

**Santa Clara University — B.S. in Computer Science**

GPA: 3.9

**Expected December 2027**

*Available Summer 2027 (Fall 2027 term remaining)*

## WORK EXPERIENCE

**Software Engineering Intern**

**June 2026 – Aug 2026**

*HerbsPro*

- Cut MySQL query volume 60% and product API p50 latency from 200 ms to 90 ms with a **distributed** cache-aside Redis layer using event-driven invalidation to hold cache coherence across a 50,000+ SKU catalog.
- Automated warehouse order routing by building a Python Model Context Protocol (FastMCP) server exposing a legacy MySQL WMS to LLM agents: live-stock read tools plus write tools generating split-shipment pick tickets.

**Software Engineer**

**May 2026 – Present**

*Adorus (adorusjewels.com)*

- Shipped AI virtual try-on at ~\$0.05/image, storing zero customer photos, after benchmarking 5 approaches (AWS Bedrock Nova Canvas, Stability, Rekognition, Gemini) on identity preservation, product fidelity, latency, and cost.
- Fixed a revenue-affecting tax bug that folded tax into shipping totals, re-sourcing authoritative amounts from Stripe's REST API and backing the fix with 3 regression **tests**; hardened a Flyway migration against a cross-environment production failure.
- Automated the post-purchase lifecycle across 6 order states with server-verified Shippo tracking webhooks, triggering transactional emails via Resend and decrementing per-variant inventory on paid orders.
- Locked a private S3 image pipeline behind CloudFront with Origin Access Control, invalidation on delete, and least-privilege IAM; built 35 REST endpoints on Java Spring Boot, PostgreSQL (AWS RDS), and a React (Vite) front end across 5 AWS services running ~\$40/month with GitHub Actions CI, Cognito **authentication and authorization** (customer/admin), and PCI-compliant Stripe checkout.

**Forward Deployed Engineer (Part-Time) — Countera**

**Aug 2026 – Present**

**AI/ML Research Assistant**

**Dec 2025 – June 2026**

*Santa Clara University*

- Co-author and primary writer of *Public Perceptions of ChatGPT as a Therapist-Like Tool: A Sentiment-Stratified Topic Modeling Study of Social Media Data*, accepted at HI-BI-BI 2026 (ASONAM-collocated, Aug 2026); proceedings forthcoming with Springer.
- Analyzed 5,000+ scraped Twitter, Reddit, and YouTube posts with an NLP and **machine learning** pipeline comparing BERTopic, LDA, and NMF topic modeling to measure public sentiment toward LLMs as a therapeutic tool.

## PROJECTS

**Internship Monitor** | *Python, SQLite, REST APIs, Railway, Discord*

*2026*

- Monitors 60+ company career pages every 45 minutes via a Python daemon running 13 parsers across Greenhouse, Ashby, Lever, Workday, and iCIMS, **debugged** against upstream markup changes; deployed 24/7 on Railway over a 4-table SQLite schema.
- Suppressed repeat alerts that ID-diffing missed with a normalized employer-plus-title dedup key that collapses re-posted requisitions issued under new job IDs; routed matches through tiered Discord and ntfy alerts.

**Kuhn Poker vs. Quantum** | *Qiskit, IBM Quantum, FastAPI, React, Vercel*

*June 2026*

- Built a full-stack game where a 12-parameter, 6-qubit variational quantum circuit (superposition + entanglement) derives the opponent's mixed strategy, deployed on Vercel and Render.
- Matched simulation within ~1.7 percentage points on a 4,096-shot run on real IBM quantum hardware, the residual gap attributable to quantum noise.

**Disease Tracker** | *React, FastAPI, AWS Bedrock, DynamoDB*

*Oct 2025*

- Served real-time disease metrics and risk assessments through a FastAPI REST API backed by an AWS Bedrock risk-scoring pipeline over DynamoDB schemas designed for **scalable** ingestion.

**Social Network** | *C++, Qt, MVC, Graphs*

*2025*

- Generated friend suggestions via BFS traversal over a custom graph in a C++ desktop app with a Qt GUI on the **MVC design pattern**, with file I/O for persistence.

## TECHNICAL SKILLS

**Languages:** C++, Python, Java, JavaScript, SQL

**Frameworks & Tools:** React.js, Node.js, Spring Boot, FastAPI, Docker (containers), Linux, Git, Qt, Vercel, CI/CD, Render, REST/RESTful APIs, unit & integration testing, Stripe

**Cloud & Data:** AWS (EC2, RDS, Bedrock, Cognito, S3, CloudFront), PostgreSQL, MySQL, Redis, DynamoDB (NoSQL), ChromaDB

**AI / ML:** Machine Learning, NLP, RAG, MCP, vector embeddings, Ollama, OpenWebUI, NumPy, Pandas, Matplotlib, topic modeling (BERTopic, LDA, NMF)

**CS Fundamentals:** Data Structures and Algorithms, Object-Oriented Design
