EDUCATION

Santa Clara University — B.S. in Computer Science

GPA: 3.9

Expected December 2027

Available Summer 2027 (Fall 2027 term remaining)

WORK EXPERIENCE

Software Engineering Intern

June 2026 – Present

HerbsPro

- Built a Python Model Context Protocol (FastMCP) server exposing a legacy MySQL warehouse management system to LLM agents: read tools for live stock, write tools that generate split-shipment pick tickets, automating order routing across the warehouse.
- Engineered a **distributed** cache-aside Redis layer with event-driven invalidation for a 50,000+ SKU catalog, maintaining cache coherence while cutting MySQL query volume by 60% and product API p50 latency from 200 ms to 90 ms.

Software Engineer & Co-Founder

May 2026 – Present

Adorus (adorusjewels.com)

- Benchmarked 5 image-generation approaches (AWS Bedrock Nova Canvas, Stability, Rekognition landmark compositing, Google Gemini) on identity preservation, product fidelity, latency, and cost (~\$0.05/image); shipped a reference-conditioned model with measurement-driven prompting that parses per-product dimensions into true-to-life scale and drape.
- Diagnosed a tax-accounting bug that folded tax into shipping totals, re-sourcing authoritative amounts from Stripe's REST API and backing the fix with 3 regression **tests**; hardened a Flyway migration against a cross-environment production failure.
- Built the platform on React (Vite), Java Spring Boot, and PostgreSQL (AWS RDS) with GitHub Actions CI: a private S3 image pipeline served through CloudFront with Origin Access Control and invalidation on delete, least-privilege IAM, Cognito **authentication** and **authorization** (customer/admin), and PCI-compliant Stripe checkout.

Forward Deployed Engineer (Part-Time) — Coutera

Incoming

AI/ML Research Assistant

Dec 2025 – June 2026

Santa Clara University

- Co-author and primary writer of *Public Perceptions of ChatGPT as a Therapist-Like Tool: A Sentiment-Stratified Topic Modeling Study of Social Media Data*, accepted at HI-BI-BI 2026 (ASONAM-collocated, Aug 2026); proceedings forthcoming with Springer.
- Built an NLP and **machine learning** pipeline analyzing 5,000+ scraped posts from Twitter, Reddit, and YouTube to study public sentiment toward LLMs as a therapeutic tool, comparing BERTopic, LDA, and NMF topic modeling.

PROJECTS

Internship Monitor | *Python, SQLite, REST APIs, Railway, Discord*

2026

- Built a Python daemon polling 60+ company career pages every 45 minutes, with 13 parsers spanning Greenhouse, Ashby, Lever, Workday, and iCIMS — **debugging** and maintaining each against upstream markup changes; state persisted in a 4-table SQLite schema, deployed 24/7 on Railway.
- Designed a normalized employer-plus-title dedup key that collapses re-posted requisitions issued under new job IDs, suppressing repeat alerts that ID-diffing missed; routed matches through tiered Discord and ntfy alerts.

Kuhn Poker vs. Quantum | *Qiskit, IBM Quantum, FastAPI, React, Vercel*

June 2026

- Built a full-stack game where a 12-parameter, 6-qubit variational quantum circuit (superposition + entanglement) derives the opponent's mixed strategy, deployed on Vercel and Render.
- Ran the circuit on real IBM quantum hardware; on a 4,096-shot run, real-chip probabilities matched simulation within ~1.7 percentage points on average, the gap attributable to quantum noise.

Disease Tracker | *React, FastAPI, AWS Bedrock, DynamoDB*

Oct 2025

- Developed a FastAPI REST API serving real-time disease metrics and risk assessments, backed by an AWS Bedrock risk-scoring pipeline over DynamoDB schemas designed for **scalable** ingestion.

Social Network | *C++, Qt, MVC, Graphs*

2025

- Built a desktop social networking app in C++ with a Qt GUI on the **MVC design pattern**; modeled friendships with a custom graph and generated friend suggestions via BFS traversal, with file I/O for persistence.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, SQL

Frameworks & Tools: React.js, Node.js, Spring Boot, FastAPI, Docker (containers), Linux, Git, Qt, Vercel, CI/CD, Render, REST/RESTful APIs, unit & integration testing, Stripe

Cloud & Data: AWS (EC2, RDS, Bedrock, Cognito, S3, CloudFront), PostgreSQL, MySQL, Redis, DynamoDB (NoSQL), ChromaDB

AI / ML: Machine Learning, NLP, RAG, MCP, vector embeddings, Ollama, OpenWebUI, NumPy, Pandas, Matplotlib, topic modeling (BERTopic, LDA, NMF)

CS Fundamentals: Data Structures and Algorithms, Object-Oriented Design, Design Patterns, dynamic programming, greedy and divide-and-conquer, runtime and complexity analysis
