EDUCATION

Santa Clara University — B.S. in Computer Science

Expected December 2027

Major GPA: 4.0

Relevant Coursework: Advanced Algorithms, Data Structures & Algorithms, Advanced C++, Theory of Automata, Linear Algebra, Discrete Mathematics

WORK EXPERIENCE

Co-Founder & Software Engineer

May 2026 – Present

Adorus (adorusjewels.com)

- Sole developer on a 4-person founding team, taking a **consumer-facing** e-commerce product from design through deployment end-to-end (pre-launch).
- Owning the full product surface — translating co-founder and stakeholder feedback into data models, API contracts, and a responsive, customer-focused UI.
- Building a responsive **React.js/Node.js** frontend backed by **Java Spring Boot** RESTful services and a **PostgreSQL** database, deployed on **AWS EC2**, with **S3** and **Cognito** for secure cloud storage and user authentication.

Incoming Software Engineering Intern

Starts June 2026

HerbsPro

- Joining the platform team to build backend features across the e-commerce stack.

Machine Learning Research Assistant

Dec 2025 – June 2026

Santa Clara University

- Built an **NLP/data pipeline** in **Python** analyzing 5,000+ scraped posts from Twitter, Reddit, and YouTube to study public sentiment toward LLMs as a therapeutic tool, applying **BERTopic**, **LDA**, and **NMF topic modeling**.
- Engineered **Pandas** preprocessing to normalize unstructured text, reducing noise in high-dimensional social media datasets.
- Produced **Matplotlib** / **Seaborn** analytics on shifting attitudes toward AI mental-health support; co-authored a paper as primary writer, submitted to **IEEE/ACM ASONAM 2026** (results expected July 2026).

CS Teaching Assistant & Algorithms Grader

Sept 2025 – June 2026

Santa Clara University

- Mentored 40+ students in **C++** (memory management, pointers, OOP) and debugged logic errors live using **GDB**.
- Graded Theory of Algorithms coursework for 40+ students across 2 sections, evaluating runtime analysis, greedy, divide-and-conquer, and dynamic-programming solutions.

PROJECTS

Disease Tracker (Hackathon)

Oct 2025

React, FastAPI (Python), AWS Bedrock, DynamoDB

[Github](#)

- Built a **FastAPI** (Python) REST API serving real-time disease metrics and risk assessments with low-latency responses.
- Engineered an **AWS Bedrock** AI risk-scoring pipeline and designed **DynamoDB** schemas for scalable data ingestion.

Kuhn Poker vs Quantum

June 2026

React, FastAPI (Python), Qiskit, IBM Quantum

[Github](#), [Live](#)

- Built and shipped a full-stack, consumer-facing game with a **React** frontend and **FastAPI** (Python) backend, deployed live on **Vercel** and **Render**.
- Ran a 6-qubit variational quantum circuit on real **IBM quantum hardware** (e.g., `ibm_fez`) to derive the opponent's strategy; real-chip results matched simulation within ~1.7 points on a 4,096-shot run.

Agentic RAG Pipeline

July 2025

Python, ChromaDB, Ollama, MCP

[Github](#)

- Built a modular **RAG** framework in **Python** over **ChromaDB** and **Ollama** for semantic search across dynamic datasets.
- Implemented an **MCP** server exposing local data as tools for AI agents via JSON-RPC, designed for drop-in integration of new datasets.

Social Network (C++ / Qt)

Sept 2025

C++, Qt, MVC, Graphs

[Github](#)

- Built a desktop social networking app with a **Qt GUI** and **MVC** architecture; modeled friendships with a custom graph and generated friend suggestions via **BFS** traversal, with file I/O for persistence.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, SQL

Frameworks & Tools: React.js, Node.js, FastAPI, Spring Boot, Docker, Linux, Qt, Git, Vercel, CI/CD

Cloud & Data: AWS (EC2, Bedrock, Cognito, S3), PostgreSQL, DynamoDB, ChromaDB

AI / ML: RAG, MCP, NLP, LLMs, Ollama, NumPy, Pandas, Qiskit, topic modeling (BERTopic, LDA, NMF)
